DETAILED ACTION

The amendment dated 1-24-05 is acknowledged.

Claims included in the prosecution are 1, 4-9, 52-55, 57, 59-66 and 68-125.

In view of applicant's arguments, the prior art rejections are withdrawn.

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1, 4-9, 52-55, 57, 59-66 and 68-125 are rejected on the ground of

nonstatutory obviousness-type double patenting as being unpatentable over claim 1-2 of U.S. Patent No. 5,902,604. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims in both said patent and instant application are directed to the same preliposomal compositions.

Instant claims are generic with respect to 'active agent' whereas the patented claims recite the specific active agent, annamycin. It would have been obvious to one of

Art Unit: 1615

ordinary skill in the art that the inventive step is in the composition itself and one can encapsulate any compound with a reasonable expectation of success. Instant claims are also generic with respect to drug-surfactant amounts whereas the patented claims recite specific ratios. However, one ordinary skill in the art would be motivated to manipulate the amounts with the expectation of obtaining the best possible results.
